

the affordable diode laser

The doctor smile SIMPLER diode laser is easy to use and has an affordable price. It is an excellent investment with made in Italy quality.

Fast and easy treatment of endodontics, periodontics, surgery, therapy, implantology and whitening is promptly available thanks to the pre-set treatments on the touch screen display. The SIMPLER diode laser was created to help beginners gain confidence with the new tool and at the same time maximize its potential for experts: it in fact includes a complete two in one working mode. The basic software allows fast access to everyday preset treatments in a single touch. The dental treatments are set to internationally approved gold standard laser parameters to help new laser users start working immediately and safely. The ADV+ advanced software is engineered to increase the performance of the laser, for better surgery and a greater variety of treatments.

The freedom to choose a fast, standard approach or a more detailed and comprehensive system gives the dentist full control of his/her time and working experience.

Special treatment Apps can also be added to the Simpler laser: they include clinically tested, internationally approved preset parameters and specially engineered tools such as the extra-oral antalgic therapy flat top handpiece, or the handpiece for skin rejuvenation.

The SIMPLER laser includes a vast array of accessories: a handpiece and tips for surgery, a terminal for biostimulation, small and wide area terminals for whitening, protective goggles and a comprehensive CD including clinical protocols and videos. For whitening, the laser combined with the doctor smile LWS whitening system guarantees fast and effective results.
