

Wiser

Elegant and innovative:
WISER, the portable laser

Diode lasers are nowadays an essential tool for the modern dental practice. The benefits that both patients and doctors derive from it will quickly pay off the investment: periodontics, implantology, surgery, endodontics, therapy and whitening become faster and less painful procedures.

Doctor Smile's WISER laser is compact, elegant and works without cables and pedals: this makes it a very practical tool for a busy dental practice, where every minute counts. This powerful 14W peak diode laser recharges in sixty seconds thanks to the patented Super Cap technology. It can then be used for various treatments without the inconvenience of cables, pedals and plugs. The WISER laser has a special SENSATOUCH finger switch built into the handpiece for strain free operating freedom.

Thanks to the interchangeable tips it is no longer necessary to cut or strip the fibre. The tips are reusable for many treatments with maximum hygiene and cost saving.

The colour display shows power, time and mode parameter settings. It can be set to the Basic mode, for fast access to common treatment procedures, or to the Advanced mode, for special applications. The bright touch keyboard is smooth with no outward buttons for easy cleaning and fast selection. The laser includes comprehensive clinical protocols and a video guide on CD.

The WISER laser becomes an even more versatile instrument when combined with the FLAT TOP AB2799 handpiece for antalgic therapy and biostimulation for intra and extraoral therapy.
