

# TWO LASERS, ONE CONCEPT.

Kombi is a high-tech medical device that will launch the traditional dental practice into the future. The word Kombi means offering many things to your patients: **less pain, faster treatment, professional skill**, smart versatility and continuous innovation in the treatment of soft and hard tissue, bone surgery.

## EXTRAORDINARY IN YOUR DAILY ROUTINE.

High quality and top performance, from the most advanced surgical procedure to everyday treatments. **Kombi will shed new light** on commonly performed routine operations such as **tooth decay**, with a more relaxed and confident approach.

The erbium laser's high power speeds up cavity preparation and eliminates annoying vibration. The right amount of laser power will avoid any fractures that could weaken the structure of the tooth and preserve all healthy tissue.

The Boost freebeam handpiece technology does not require tip changes for different treatments: it operates without contact therefore improving hygiene.

# EVOLUTION MEANS KNOWLEDGE.

Do you want to start using laser technology but lack the experience? Would you like to learn more about a specific laser application? Doctor Smile, in collaboration with Master Class Academy, offers courses at various levels held by our skilled laser tutors that include the analysis of different clinical cases and hands on practical sessions. More information and the course agenda are available at [masterclassacademy.it](http://masterclassacademy.it)

**Made in Italy** Kombi – Two Lasers, One Concept is a CE medical device entirely made in Italy.

Model	Doctor Smile Kombi
Code	LAEDL 001.1
Wavelength erbium	2940 nm
Laser source power erbium	15W
Wavelength diode	808 nm
Laser source power diode	20W
Max energy	400 mJ
Frequency	20 Hz
Size (WxHxD)	40x90x80 cm
Weight	50 kg
Medical /Laser class	II B / 4

All LAMBDA SpA laser devices are CE certified according to medical device directives 93/42 and 47/2007.

- Etching
- Composite removal
- Sealing grooves
- Desensitization

## BONE SURGERY

- Split-crest
- Sinus lift
- Implant site preparation
- Crown lengthening
- Apicoectomy
- Bone implant

## WIDE RANGE OF ACCESSORIES.

Doctor Smile Kombi is supplied with a complete set of accessories, which make it suitable for several dental purposes.

## MANY TREATMENTS, ONE LASER.

The laser is a widely used device in varied fields of medicine. In the dentistry sector it has achieved enormous results, offering numerous clinical benefits with lower risks or problems for patients. The **precision** and physical properties of the instrument make it **safe**, **versatile** and **reliable**. It has been developed to assist traditional devices, improving clinical conditions and reducing the need for anaesthetics.

The erbium laser works without causing thermal damage to the underlying tissue, and without vibration - avoiding the risk of micro-fractures. Its treatment of enamel, dentine or bone makes it particularly suitable for hard tissue.

The diode laser, thanks to the way in which it functions, is able to sterilize the treated area avoiding infection and speeding up recovery rates, offering a soothing, haemostasis effect. For these reasons it is particularly advised in the treatment of soft tissue.

Doctor Smile **Kombi** erbium&diode laser is the ideal solution. The reduction of pain and the absence of irritating vibrations help to increase comfort and peace of mind, therefore aiding the collaboration of the patient.
