

GET THE MOST OUT OF YOUR DIODE LASER!

doctor smile®
dental laser

Did you know that you can treat many painful extra-oral conditions with your dental laser?

Analgesic therapy and biostimulation is now possible with your diode laser with the new AB2799 FLAT TOP handpiece. The AB2799 FLAT TOP handpiece was created thanks to the collaboration with Prof. A. Benedicenti, author of the comprehensive Atlas of Laser Therapy (teamwork media ed.) in which many therapeutic uses of the laser are described. The handpiece guarantees a constant and optimal amount of energy absorption over a 1 cm² area for an easy application of the clinical protocols. The handpiece can be held at a variable distance from the treated surface (up to 1m the energy does not vary) without varying the energy output but must not be held in direct contact with the skin.

Headaches, herpes, sinusitis, arthritis, arthrosis, trigeminal neuralgia, TMJ disorder, tennis elbow and many other painful conditions can be treated effectively with different cycles of applications in specific areas. A specific app that includes the FLAT TOP handpiece is available for the Simpler laser. It is also available for the Wiser laser and other diode laser on demand.
