

BOOST HANDPIECE

doctor smile[®]
dental laser

The BOOST handpiece for the PLUSER erbium laser is an innovative tool for tipless dentistry applications on soft tissue, hard tissue or bone surgery.

Thanks to the focused beam the spot size can be changed without the hassle of changing tips. No tip changes means fewer risks of cross infection and minimal maintenance. The BOOST handpiece enhances the PLUSER's surgical power by focusing 8W in 400 µm for a perfect incision.
